Vol. 15 No. 1 January–February 1993

General Articles

1 Planning policy on science education in developing countries
Keith M. Lewin

17 Quality provision in science in an environment with limited commercial resources
June M. George

Research Reports

27 The nature of scientific knowledge, knowing and learning: the perspectives of four physics students
Wolff-Michael Roth and Anita Roychoudhury

45 Dealing with dilemmas of laboratory science: making sense of safety from a constructivist perspective
Deborah J. Tippins, Kenneth G. Tobin and Karl Hook

61 Retention and attrition of science talent: a longitudinal study of Westinghouse Science Talent Search winners
Rena F. Subotnik, Richard A. Duschl and Eric H. Selmon

73 Dimensions of children's conceptions of energy
Gillian Nicholls and Jon Ogborn

83 Young children's (7–11) ideas about light and their development
Jonathan F. Osborne, Paul Black, John Meadows and Maureen Smith

95 Toward a fully human science education: an exploratory study of prospective teachers' attitudes toward humanistic science education
Phillip B. B. Moheno

107 Gender and racial differences in unstructured learning groups in science
Catherine R. Conwell, Sandra Griffin and Bob Algozzine

Vol. 15 No. 2 March–April 1993

Innovations and Developments

117 How to make the learning of photosynthesis more relevant
Yehudit Eisen and Ruth Stavy

Research Reports

127 The alternative frameworks presented by Mexican students and teachers concerning the free fall of bodies
Elaine Reynoso, H., Enrique Fierro, H., Gerrdo Torres, O., Matilde Vicontini-Misioni and Josefina Pérez de Celis, H.

139 Children's energy concepts: a cross-age study
Ricardo Trumper

149 Weight and gravity: teachers' ambiguity and students' confusion about the concepts
Igal Galili

163 The classical concept of mass: theoretical difficulties and students' definitions
A. Doménech, E. Casasús and M. T. Doménech

175 Agreement between student expectations, experiences and actual objectives of practicals in the natural sciences at the Open university of The Netherlands
Paul Kirschner, Marthie Meester, Evert Middelbeek and Henry Hermans

199 Interpreting trends in multiple-curve graphs of ecological situations: the role of context
Jenny Preece and Claude Janvier

213 Innovation in a science curriculum: A Sierra Leone case study
Andrew Baimba, Robert Katterns and Valda Kirkwood

221 Facilitating conceptual change in chemical equilibrium using a CAI strategy
H. Hameed, M. W. Hackling and P. J. Garnett

Vol. 15 No. 3 May–June 1993

General Article

231 The nature and role of hypotheses in school science investigations
Martin Wenham

Research Reports

241 Referents for making sense of science teaching
Kenneth Tobin

255 The introduction of modern physics: overcoming a deformed vision of science
D. Gil and J. Solbes

261 Science education in the new South Africa: reflections and visions
Michael Kahn and Marissa Rollnick

273 Expert and novice, earth and space science: teachers' declarative, procedural and structural knowledge
Robertta H. Barba and Peter A. Rubba

283 Conceptual competition in physics learning
David P. Maloney and Robert S. Siegler

297 National curricula for advanced science classes in American high schools? The influence of the College Board's Advanced Placement Program on science curricula
Norman Edward Herr

307 I would like to know more about that: a study of the interest shown by girls and boys in scientific topics
Anne Qualter

319 Enhancing high school students' achievement in chemistry through a thinking skills approach
Juliet Strang and Michael Shayer

339 Students' understanding of voltage in simple series electric circuits
Robin Millar and Tom King

Vol. 15 No. 4 July–August 1993

Research Reports

351 Students' understanding of voltage in simple parallel electric circuits
Robin Millar and Kian Lim Beh

363 The use of a conceptual change model and mixed language strategy for remediating misconceptions on air pressure
Marissa Rollnick and Margaret Rutherford

383 The images of science of teachers in Latin countries
R. Ruggieri, C. Tarsitani and M. Vicentini

395 Understanding biosystem organization. Part 1: verbal relations
R. C. Paton

411 Attitudes of children to the uses of animals
Martin Stanisstreet, Nina Spofforth and Trefor Williams

427 Learning the statistical analysis of measurement errors
Marie-Geneviève Séré, Roger Journeaux and Claudine Larcher

439 The effect of age and of learning on the ability to distinguish between anthropomorphic and teleological explanations
Y. Friedler, A. Zohar and P. Tamir

445 The role of multiple data sources in interpretive science education research
Srinivasiah Muralidhar

457 Primary teachers' self-perceptions concerning implementation of the national curriculum for science in the UK – revisited
Clive Carré and David Carter

Vol. 15 No. 5 September–October 1993

Special Issue: Environmental Education and Science Education

471 Editorial. Where are we now with the environment and education?
Christopher Gayford

473 How wetland habitats are perceived by children: consequences for children's education and wetland conservation
Sarah Anderson and Brian Moss

487 From Santa Claus to sustainability: emergent understanding of concepts and issues in environmental science
Joy A. Palmer

497 Learning science by practical work in Finnish primary schools using materials familiar from the environment: a pilot study
Leena Aho, Johanna Huopio and Satu Huttunen

509 Science and environmental education at the primary level in Malta: separate interests, different roles
Frank Ventura

521 Discussion-based group work related to environmental issues in science classes with 15-year-old pupils in England
Christopher Gayford

531 The 'Greenhouse Effect': children's perceptions of causes, consequences and cures
E. Boyes and M. Stanisstreet

553 Development of conceptual knowledge and attitudes about energy and the environment
Carmen Gomez-Granell and Salvador Cervera-March

567 Teacher education for the environment: a comparative view from Australia and the UK
John Nicholas, Chris Oulton and William Scott

575 Technological education and the environment
Patrick J. Dillon

591 Towards a meta-research agenda in science and environmental education
Ian Robottom and Paul Hart

607 Environmental education, narrative complexity and postmodern science/fiction
Noel Gough

626 Announcement

Vol. 15 No. 6 November–December 1993

General Article

627 Transitions from objectivism to constructivism in science education
Nancy T. Davis, B. Jo McCarty, Kenneth L. Shaw and Amal Sidani-Tabbaa

Research Reports

637 Understanding biosystem organization. Part 2: towards a theoretical framework
R. C. Paton

655 University physics students' conceptualizations of factors affecting the speed of sound propagation
Cedric J. Linder

663 A working memory model applied to physics problem solving
A. H. Johnstone, W. R. Hogg and M. Ziane

673 Transforming subject-matter knowledge: the role of pedagogical content knowledge in learning to reflect on teaching
Arthur N. Geddis

685 Student achievement in science: a cross-cultural comparison of the Second International Science Study (SISS) results in Nigeria
Chinedum Mordi
